

MARINA DREDGING AND IMPROVEMENT

Fernandina Beach, Florida

Passero Associates provided design and construction inspection services for the dredging and disposal of over 60,000 cubic yards of silt material from the downtown marina of Fernandina Beach. Located within the City's Historic District, the marina serves both local and transient recreational and commercial vessels.

Due to the timely and successful completion of this project, the City is making provisions for future dredging. A separate line item is now included in the marina annual budget to set aside funds each year for future dredging.
