

TURK HILL ROAD IMPROVEMENTS

Monroe County, New York

Passero Associates was retained to provide engineering planning and design services for the reconstruction and rehabilitation of 2.4 miles of Turk Hill Road, which winds through a hilly terrain.

A project initiation report was written which included traffic and accident analysis and projected impact from future traffic conditions. We prepared utility inventory investigations and presented findings to public meetings and workshop sessions with advisory groups. Design services included: extending and relocating watermains; enhancing erosion control measures; and a detailed maintenance and protection of traffic plan with off-site intersection improvements to mitigate impacts from the traffic detour.

This project received the American Public Works Association, Monroe County/Genesee Valley Branch - "Project of the Year" Award.

Client:
Monroe County

Construction Cost:
\$2,800,000
