

## TERMINAL BUILDING IMPROVEMENTS

*Watertown International Airport  
Hounsfield, New York*

Passero Associates provided design services for this renovation of an existing commercial service airport terminal building, including assessment and concept planning for continued development. Budget constraints restricted the work to the first floor of the 3,600 square foot two-story structure. Design includes space development for secured passenger waiting, ticketing, unsecured public waiting, passenger movement control, secured baggage handling provision and airline office space.
